

Corse Dynamics Idle Air Filter Kit

Motowheels.com / Corse Dynamics

Fitment: Ducati models with fuel injection and idle air control.

Kit contents:

- 1 K&N Vent Filter
- 1 hose coupler
- 3 hose clamps
- 12 inches of black hose
- Zip ties

Note: This kit is intended to be installed in conjunction with and aftermarket filter kit when no longer using the factory air box.

1. Remove the Tank and air box.

2. Locate the idle air valve.

The idle air valve is a servo-operated valve which meters air into the engine while the motorcycle is idling. The ECU uses this valve to maintain the proper idle. It is located between the throttle bodies and has a small rubber hose connecting it to the airbox.

3. Remove the hose from the valve to the airbox.

4.A Basic install

Install the K&N filter directly to the valve.

4.B. Remote install

Attach the hose to the valve and clamp on. If you are install this kit with the corse Dynamics Velocity stack kit and have the flange that has filter mount run hose to the port and clamp. You will install the filter on top of that plate, If not insert the coupler into the end of the hose and install filter. You can zip-tie the hose to keep it from moving around.
