

Operating Instructions for *m.view* mirrors

Thank you very much for choosing a high quality product from motogadget. All of our products are designed and manufactured in Berlin, Germany.

Our *m.view* mirrors are unique. They are made from one piece of solid aluminum and are unbreakable, super thin, frameless and many times lighter than conventional glass mirrors.

The reflecting surface is machined directly into the aluminum body and then coated with a wafer-thin, glassy layer of silicon dioxide (SiO₂). This coating is UV, weather and chemical resistant and also scratch resistant like conventional glass mirrors.

Important note for handling and cleaning *m.view* metal mirrors

Impact with hard objects can damage the mirror surface. Therefore, the protective film must remain on the mirror during installation. After finishing the installation at the handlebar the protective film may be removed.

Only clean the mirror with water, soap and a soft cloth. Do not use paper towels or abrasive cleaning agents.

The motogadget team wished you pleasant and safe riding, and lots of fun with your new *m.view* mirrors.
