

# NKComponents NKComponents NKComponents

These ultra lightweight bolts are constructed of Ti6Al4V Grade 5 Titanium, precision machined with a hex head, torx inner provision, and center gun drilled entirely through the bolt for optimum weight savings.

These bolts measure M8 x 20 / 1.25 pitch

Designed as rotor bolts for all Ducati and Aprilia applications

Technical Drawing:

Installation Instructions:

All bolts must be installed with anti-seize to prevent galling. All bolt kits will include copper anti-seize, but if bolts are purchased individually you will need to supply your own anti-seize.

The recommended torque spec for these bolts is the same as the factory OEM bolts at 25NM = 19 ft-lb

Thank you for your purchase!

All NK Components are designed for off-road use only and not approved for road use. All race products are to be operated at your own risk; the installation of this product indicates you are assuming all risk with this product. Again thank you for your purchase and see you at the track.
