

We wanted to give you a sneak peek inside Corse Dynamics clutch cover manufacturing.

We start with a 12' stick of 6061 T-6 Billet Aluminum

Then we cut each individual cover in our CNC saw

Then we turn the billet blanks down on our CNC lathe

We then flip over the blanks and turn down the face on our CNC lathe

This removes over 12 lbs of material allowing us a clean slate to manufacture every style of Corse Dynamics clutch cover.
