

CORSE DYNAMICS Billet Fuel Sending Unit Replacement Nut - Ducati 1990-2003

- Remove the tail section.
- Remove and drain the fuel tank.
- Set the tank upside down on a clean and soft towel on a workspace.
- Using a pick, remove the red plate from the inside of the plug on the sending unit.
- Make a note of the orientation of the wire colors on the plug itself.
- Using a small pointed pick or small flat blade screwdriver carefully push the tab to allow the pin and wire to be removed from the plug. Remove all four wires and pins.
- Loosen and remove the nut for the fuel sending unit.
- Check the gasket on the sending unit for cracks or tears, replace if necessary.
- Install the new billet nut in place.
- Tighten nut ensure the seal is fully seated (Ducati does not specify an exact torque spec)
- Reinstall the wires into the factory plug.
- Reinstall the fuel tank and add fuel, check for leaks around the sending unit and fuel lines.
- Reinstall the tail section.
