## Installation Instructions

06-0203/06-0204 SpeedyMoto Ducati Clutch Pressure Plate

### Parts included

1. One very special SpeedyMoto clutch pressure plate
2. One very special throw-out bearing (installed)
3. One very special SpeedyMoto pushrod pin with o-ring (installed)

### Tools required

1. 5mm Allen wrench
2. 4mm Allen wrench
3. Torque wrench

### Installation

1. Remove right side fairing if applicable.
2. Remove clutch cover.(Throw away rubber gasket)

#### Note:

Take note of the positions of the different-length bolts, as they will need to be reinstalled in their original positions.

3. Remove the 6 bolts retaining the springs and spring retention caps.
4. Gently pull the pressure plate away from clutch assembly, the pushrod may pull out with it, if so simply remove it and re-install it into your new speedymoto pressure plate.(Be sure to put the end with the o-rings opposite the pressure plate)
5. Install your new pressure plate onto clutch assembly, taking care to align the notched hole on the pressure plate with the notched post on the clutch assembly. (Fig. 5)
6. While pushing the pressure plate into final position, wiggle the plate until the cogs align and seat.
7. Reinstall springs and caps back onto posts. Torque all six bolts to 5 Nm (~3.7 Ft. Lbs.).

#### Note: BE VERY CAREFUL NOT TO OVER-TORQUE BOLTS.

5Nm is just over finger tight and bolt heads will shear off if they are tightened too much.

8. Reinstall clutch cover.
9. Replace bodywork if applicable.
10. Ride it, and tell all your friends about SpeedyMoto!
